

Imagine a curriculum where kids aren't just reading about other people's stories—they're writing their own. Instead of dissecting centuries-old tales that have no relevance to their lives, they're documenting their own experiences—the things that matter to them, in their voices, their words, and their truth.

That's exactly what the NexGen Creators Institute is all about. It's a bold, innovative, future-focused movement that turns young people into storytellers, media producers, public speakers, and published authors.

By the end of this program, every student will publish a book—not a book about Shakespeare, but a book about them—their stories, their communities, their perspectives.

We're teaching kids how to take their thoughts, their experiences, and their creativity and turn them into something real—something that lives on a bookshelf, in a podcast, on a debate stage, or even in a news broadcast.

With your help, we're investing in the voices of the future.

Blooksy Turns Your Words into a Book

Using the AI-powered software platform Blooksy, scholars transform their creative writing into polished, published masterpieces. Being an author is a badge of honor that stays with them for life and the ultimate flex.

Write and Perform Your Song

Scholars transform their life experiences into music! Working in teams, they create original songs, write lyrics, and choreograph TikTok dances to bring their stories to life.

Audiobook Production

Scholars bring their words to life by becoming voice actors. They record and produce audiobooks based on their writing, learning how to captivate an audience with the power of their voices.

Mock News Cast

Turning essays into newsworthy stories, scholars learn how to break down ideas into concise, engaging news reports while taking on roles like anchors, producers, and editors to run a newsroom.

Debate

Scholars deconstruct their essays and defend their ideas in structured debates, sharpening their reasoning, critical thinking, and ability to articulate their positions with confidence.

Introduction to AI Prompting

Scholars tap into the power of artificial intelligence, learning how to use AI tools to brainstorm ideas, refine their work, and unleash their creativity.

Podcast Production

Scholars explore the art of podcasting by writing, recording, and producing their episodes. They'll learn how to share their stories, amplify their voices, and connect with audiences on a global scale.

Being a Content Creator

Scholars discover how to grow their audiences, build personal brands, create engaging content, and speak on stage to establish themselves as influencers in the digital space.

Lights, Camera, Acting For Teens

Dreaming of the big screen? Scholars will learn the skills to jumpstart their journey into Hollywood. From understanding scripts to performing, this program gives them the foundation to step onto the big screen.

Participants Will Learn

Creative Writing: Craft compelling stories, essays, and content.	Media Literacy: Learn to create and interpret impactful media.	Public Speaking: Perform with confidence and authenticity.
Leadership: Lead projects and inspire others to action.	Teamwork: Collaborate and communicate effectively with peers.	Critical Thinking: Analyze, debate, and articulate ideas.
Publishing: Transform writing into a professionally published book—creating a legacy that lasts forever.	Digital Skills: Master AI tools, podcasting, video/audio editing, and influencer strategies.	Performance Skills: Act, speak, and present with confidence across different formats.

The NexGen Creators Institute is an investment in young minds, young leaders, and young storytellers.

They're building a legacy—one where students leave with a book in their hands, confidence in their voices, and the skills to take control of their own narratives.

Together, we have the chance to lead the way. Let's make it happen.
